

Project Asbestos Management

Client
Kuis PLC
Cost
£3,800

Location
Kebroyd Mills
Program
10 Days

LK Associates were asked to undertake a Type 3 asbestos survey and provide an asbestos register for our client Kuis PLC at Kebroyd Mills, Ripponden in September 2007.

This encompassed identifying the presence of any asbestos-containing materials and formalising a strategy for managing the removal of all identified asbestos containing materials (ACM's) which consisted of 4 redundant mills due to be sold to an investor.

The management plan combined the following methods:-

- Initial site visit
- Type 3 Asbestos survey, leading to a comprehensive report
- Identify high risk areas, and immediate recommendations
- Tender asbestos removal work

LK Associates carried out the survey over a 4 day period taking 63 samples in the process; we had to close down the rear end of the site due to high levels of contamination from the boiler room and surrounding areas due to fire, causing damage to the entire run of pipe lagging within the boiler room.

Once the survey was completed the samples were issued to the Laboratory and once the analysis was completed we issued the report to the client within a further 4 days.

Since completing the survey the asbestos debris has been removed by a licensed Asbestos removal contractor and removal works are now being undertaken to the remainder of the site.
