

Project Japanese Knotweed Remediation

Client

Mowlem / Carillion

Cost

£63,500

Location

Northampton

Program

4 Weeks

Mowlem / Carillion were contracted to construct a bypass to the South of Northampton. LK Pollution Response Limited mapped over 19 independent areas of Japanese Knotweed, measuring well over 1000m² total area.

To enable the project to proceed smoothly and in time, LK Pollution Response designed a controlled excavation methodology with a manual and mechanical sifting and burial exercise. Other areas near to watercourses were treated with herbicides as specified in the Environment Agencies Guidelines.

The project is currently ongoing but the planned work for Japanese Knotweed eradication is on schedule and the remediation process will be completed as programmed in 2007.
